

Features and Services

- Interpolated bathymetric blue-scale shaded contour map around high definition shorelines
- Submerged aquatic vegetation height mapped as percent biovolume (heat map)
- Hardness of bottom as measured by reflectivity/absorption strength of acoustic signal
- Static HTML summary reports of bathymetric and plant density information automatically generated with each upload
- Export point or grid spreadsheet data to use in 3rd party statistics or GIS software
- Export high resolution map imagery
- Trip replay, Editing, Polygon, and Waypoint tools
- Merge trips from multiple periods of time and create a uniform output
- Offset depth data to a standard elevation benchmark
- Easy to search cloud archive of maps and data
- Quality control review and technical support by technology experts
- Organizational sharing

PLANS

Subscription	Waterbody Size Options*	Geographic Boundaries	Term	Number of Users
Single Survey	0-30, 31-750 acres	Waterbody Boundary	One day	No restriction
Unlimited Waterbody	0-30 acres, 31-750, 750-10,000, >10,000	Waterbody Boundary	12 Months	No restriction
Single User	Any	None	12 Months	One
Local Government**	<100 acres	Jurisdictional Boundary	12 Months	No restriction

*Contact us about special waterbody features (e.g., coast lines, rivers, harbors)

**Bathymetry Layer Only

Contact us about special bundle pricing for any Lowrance or Simrad hardware.

BioBase is also compatible with most third party DGPS systems. Inquire with us about details.
